Deep Trekker Inc.

Dear Recruiting Team,

I am excited to apply for the Quality Assurance Engineering position at Deep Trekker Inc. as an engineering student. With my strong foundation in software development and hardware experience, I believe I possess the skills and qualities necessary to thrive in this role.

Enrolled in an engineering program, I have gained a solid understanding of core engineering principles and practices. I am particularly passionate about software development and have hands-on experience with C/C++, Python through courses and past coop experiences. In the past coop, I have maintained a web-based data visualizer, applying my knowledge on HTML and CSS. In addition, I am also very familiar with JavaScript and mordern frameworks like React.

As for embedded systems, I have had numerous years of experiences with Raspberry Pi and arduino in my free time. I have also developped an automatic watering system with STM32 in a past course, written in C.

Thank you for your time and consideration. I am available for an interview at your convenience.

Sincerely,

Shi Qi
